

Telvent awarded contract for water supply management system for the State of Qatar

Madrid, August 16, 2005 – Telvent (NASDAQ: TLVT), the Global RealTime IT Company, announced today that it was awarded a contract by “Kahramaa”, the Qatar General Electricity & Water Corporation, to implement a water management system for the supply of drinking water in Doha, capital of the State of Qatar. The contract is valued at approximately 8.5 million euros.

Manuel Sánchez Ortega, Telvent chairman and chief executive officer, commented, “With this significant new contract, Telvent reinforces its presence in the Middle East. Telvent has already implemented several projects in the region in our core business segments, including the water supply system for the city of Amman (Jordan), management of the water distribution network in Ankara (Turkey), management of the gas pipeline system that joins Turkey and Iraq, and a gas pipeline control system for GASCO in Cairo (Egypt).”

The Doha project, covering an area of approximately 11,437 square kilometers and supplying water to a population of almost 750,000, is part of a technology innovation program that is currently being developed in Qatar. Telvent will design and install a turnkey supervisory, control and data acquisition system as well as the related communications infrastructure for the drinkable water supply network in the city of Doha and surrounding area. The system will feature a variety of value-added applications such as leakage management, pressure control and water quality software, and will also include the implementation of a Control Center facility at West Bay Lagoon, located in Doha.

The system design will utilize Telvent’s industry-leading technology platform for real-time information management - OASyS DNA - which has been developed using the company’s extensive R&D program. This technology platform is an evolution of the system software which already manages water and wastewater systems in numerous other Telvent installations, including the cities of Columbus (U.S.), Lima (Peru), Seville (Spain), Ankara (Turkey), and Amman (Jordan).

Telvent (NASDAQ: TLVT), the Global RealTime IT Company, is specialized in high value-added solutions in four specific industrial sectors (Energy, Traffic, Transportation and Environment) in Europe, North America, Latin America and China. (www.telvent.com)
